

HYDRO ONE'S REAL ESTATE MANAGEMENT SYSTEM (REMS)

AT A GLANCE

You need an industrial strength information management system when you're responsible for tens-of thousands of real estate assets throughout Ontario and require 800+ staff to have access, anywhere at any time. The Real Estate Management System (REMS) at Hydro One Networks Inc. (HONI) provides dynamic, map-based data management and reporting of Hydro's transmission corridor real estate portfolio data. It's the "single source of the truth" for main office, field staff and management.

CHALLENGES

With a fast-paced and ever-changing business landscape demanding timely decisions, HONI needed an information management solution that could empower staff. REMS is a comprehensive solution that fully supports HONI's real estate processes and data management needs. It is based on the GeoPortal service and was developed and implemented by SKE Inc. in partnership with HONI.

SOLUTION

REMS provides a one-window view of all HONI real estate data. It integrates very large document repositories, tabular databases and maps all within SKE's award winning GeoPortal service. Users can maintain, query, visualize, and report on their information holdings, all within one secure cloud-based environment from anywhere at any time.

BENEFITS

- Web-based; mobile capable; used in main office and field, anytime.
- Easy to maintain and allows for continuous updates. Changes are seen immediately.
- Empowers users to self-serve and make timely and informed decisions.
- Leverages the "power of geography" to provide place as part of the business intelligence view.
- Improves communication both internally and with clients and partners – building understanding and supporting partnerships and data sharing.
- Simple to learn and use. Fully supported by SKE.
- Based on SKE's proven GeoPortal service. Out-of-the-box technology and capabilities all hosted in a secure cloud environment.
